PROFESSIONAL SUMMARY

Backend-focused Software Engineer with expertise in designing and scaling distributed systems serving thousands of users. Proven experience in building robust APIs, optimizing database performance, and mentoring development teams. Specialized in JavaScript ecosystem with strong foundations in microservices architecture and modern backend frameworks.

TECHNICAL SKILLS

Programming Languages: JavaScript, Python, TypeScript, SQL
Backend Frameworks: Node.js, NestJS, Django, FastAPI, Express.js
Databases: PostgreSQL, MongoDB, MySQL, Redis
Cloud & DevOps: CI/CD (GitHub Actions, Jenkins), Docker, Infrastructure as Code, Microservices
APIs: REST, GraphQL, gRPC, OpenAPI/Swagger
Tools & Technologies: Apache Kafka, Load Testing, Database Optimization

PROFESSIONAL EXPERIENCE

Backend Engineer | Bluehouse Technologies | Jan 2025 – Present

- **Optimized database performance** by implementing advanced indexing strategies and query optimization, reducing response times by 35% across critical application endpoints
- **Mentored 10+ junior engineers and learners** on backend best practices, JavaScript fundamentals, React framework, code review processes, and system design principles
- **Developed scalable REST APIs** using Node.js and NestJS, handling 50,000+ daily requests with robust error handling and comprehensive documentation
- **Implemented CI/CD pipelines** using GitHub Actions, reducing deployment time by 60% and ensuring zero-downtime releases
- **Collaborated with cross-functional teams** to design and implement microservices architecture supporting multiple client applications

KEY PROJECTS

Scholarship Application and Disbursement Platform | *Personal Project*

Role: Full-Stack Developer & System Architect

- **Built comprehensive scholarship management system** serving 500+ students with automated application processing, eligibility verification, and disbursement tracking
- **Implemented Redis-based caching layer** with consistent hashing and automatic failover, achieving 99.5% uptime and sub-100ms response times
- **Designed secure payment integration** with multi-step verification process and audit trails for financial transactions
- **Created admin dashboard** with real-time analytics, application status tracking, and automated report generation
- **Deployed using Docker containers** with load balancing and monitoring setup for production-ready scalability
- **Technologies:** React, NestJS, PostgreSQL, Redis, Docker, JWT Authentication

Travel Companion App | *Personal Project*

Role: Backend Lead Developer

- **Architected travel platform backend** supporting 1,000+ registered users with personalized recommendations engine
- **Integrated multiple third-party APIs** including Google Maps, hotel booking services, restaurant databases, and ride-sharing platforms
- **Built intelligent recommendation system** using user preferences and location-based algorithms to suggest hotels, restaurants, and attractions
- **Implemented real-time booking system** with inventory management, payment processing, and confirmation workflows
- **Developed geolocation services** for proximity-based search and route optimization features
- **Created comprehensive API documentation** using Swagger for frontend team integration
- **Technologies:** JavaScript, NestJS, MongoDB, Google Maps API, Socket.io, Payment Gateway Integration

E-commerce Microservices Platform | *Open Source Contribution*

Role: Core Backend Contributor

- **Contributed critical order management and inventory services** to high-traffic e-commerce platform handling 10,000+ daily transactions
- **Implemented saga pattern for distributed transactions** across 12 interconnected microservices, ensuring data consistency and system reliability
- **Built event-driven architecture** using Apache Kafka for real-time inventory updates, order processing, and notification systems
- **Developed comprehensive testing suite** with unit, integration, and end-to-end tests achieving 95% code coverage

- **Optimized database queries** and implemented caching strategies, improving system performance by 40%
 - **Created detailed technical documentation** and contributed to architectural decision records
 - **Technologies:** JavaScript, Apache Kafka, MySQL, Redis, Docker, Microservices Architecture
-

EDUCATION

Bachelor of Technology in Chemistry (Industrial Option)

Federal University of Technology Minna, Niger State | 2011 - 2017

CERTIFICATIONS & ACHIEVEMENTS

- **ALX Certified Software Engineer - Professional (2024)**

Relevant Technical Coursework: Data Structures, Algorithms, Database Systems, Distributed Systems

- **Active Contributor** on Stack Overflow with focus on backend development and JavaScript ecosystem
 - **Mentorship Program Leader** - Successfully guided 10+ junior developers through career transitions
 - **Open Source Advocate** - Regular contributor to various backend frameworks and developer tools
 - **Technical Speaker and Writer**
-

ADDITIONAL INFORMATION

- **Languages:** English (Fluent), Iguta - Hausa (Native)
- **Open Source:** Active contributor to ReactJS community, MongoDB drivers, and various backend frameworks
- **Technical Interests:** Distributed Systems, Performance Optimization, Developer Education
- **Availability:** Available for immediate start
- **Work Authorization:** Authorized to work in Nigeria, open to international remote opportunities
